Agile Methodology

Web Developer Experience

New York Code and Design Academy, New York, NY

Development Fellow/Junior Web Developer

Boot Camp Student

May 2016 – Present

Nov 2015 – Mar 2016

- Part of **Developer Fellowship Program** of NYCDA. Development fellows assist main development team to push production level code to main application. Team uses agile methodology to tackle the weekly sprints. **Ruby on Rails** is the stack currently used for the website.
- Back-end code pushed to main application mostly related to the SugarCRM API that helps streamline new student leads for admissions officers. Refining codebase for SugarCRM lead to an increase of enrollment by 13%.
- Modified student dashboard to streamline experience as well as provide easily accessible payment options for the student. Other UI modifications included a new admin navigation bar to help admins access critical parts of website with less effort.
- One of three boot camp graduates chosen to participate in the Fellowship program.

Web Applications

Salty- Microblog that was made with the Meteor.js framework. Users are able to anonymously post "rants" about their day.

MBanking -Web application that used D3.js to visualize basic banking information such as account balances, balance history throughout the month and transactions. Emphasis was placed on users ability to discern vital account information quickly.

Truckly - Rails project made with 2 other team members that used Google Maps API and Geocoder Ruby gem.

Past Work Experience
