Bootstrap	Express.js	Git

Web Developer Experience

New York Code and Design Academy, New York, NY
Junior Web Developer   May 2016 – Sept 2016

- Selected by NYCDA leadership to be a part of **Developer Fellowship Program** of NYCDA. Team uses agile methodology to tackle the weekly sprints. **Ruby on Rails** is the stack currently used for the website.
- Introduced multiple changes to SugarCRM API to streamline workflow for academic team to reach new students and on board current students of the school.
- Modified student dashboard to streamline experience as well as provide easily accessible payment options for the student. Other UI modifications included a new admin navigation bar to help admins access critical parts of website with less effort.
- One of three boot camp graduates from multiple cohorts chosen by leadership to participate in the Fellowship program.

Web Applications
Cinch- A food made for anyone and everyone who has asked the question "What do I want to eat right now?" Multiple food choices are rendered for the user based upon their geo-location. App was made with Node and Express frameworks as well as multiple and Yelp API calls as well as heavy use of AJAX.
MBanking - Web application that used D3.js to visualize basic banking information such as account balances, balance history throughout the month and transactions. Emphasis was placed on users ability to discern vital account information quickly.
Truckly - Rails project made with 2 other team members that used Google Maps API and Geocoder Ruby gem.
